Exemple 6 Touit une loi exponentielle de paramètre > 0. 1) Soit t > 0: $P(T \leq t) = \int_{A}^{-\lambda x} dx$ $P(T \leq t) = \begin{bmatrix} -e^{-\lambda x} \end{bmatrix}_{0} =$ P(T<E)=-e-1+1 lim - e = 0 par composition t->+co donc lim P(T≤t)=1 t->+0

2) On suppose que $P(T \le 7) = 0,5$ $P(T \le 7) = 1 - e$ donc on resout: 1 - e = 0,5

$$\begin{array}{c} (=) & e^{-\frac{1}{2}\lambda} = 0,5 \\ (=) & -\frac{1}{2}\lambda = \ln(0,5) \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb} \\ (=) & \lambda = \ln(0,5) \times 0.055 \, e^{1/03} \, \text{mb}$$

$$= \ln(0,5) \times 0.055 \, e^{1/03} \,$$

b) On doit akuler: D'après la propriété de dyrée de vie sons vieillissement des lois exponentielles: $P(T \ge 5+2) = P(T \ge 5) \approx 0,60$ C) Papies une Jamulo du
